Fillin Workspace Test

1 Convergence Tests

Ignored here, not in an exercise: _____.

1. Complete the table.

Test	**Hypotheses**	**Conclusion**
Ratio test		
Root test		
Integral test		

An ordinary blank still works: _____.

Testing mathematics:

$x =$

Solution. Ignored in a solution: _____.

2 Not a Printout

Checkpoint 2.1 Ignored outside a printout: _____.

Checkpoint 2.2

- Inside inline math (short, space for x): $\sin(\quad)$
- Inside inline math (default, space for XXX): $\sin(\quad)$
- Inside exponents and subscripts (each is space for the string "12"). In this case, be sure to wrap your exponents and subscripts in braces, as would be good LaTeX practice anyway: $x^{5+\quad}\, y_{\quad}$
- Inside inline math (too long for this line probably, 40 characters long): $\tan(\quad)$
- So use inside a displayed equation

  $$16 \log \quad$$

  like this one.
- Inside the second line of a multi-line display:

  $$\begin{aligned} y &= x^7\, x^8 \\ &= x^{\quad} \end{aligned}$$

- This fillin has the historical `@characters` attribute for a fillin inside math: $1 + \quad + 4 = 10$, which may be more convenient, but may not side properly in places like subscripts, superscripts, fractions, limits of integrals, and so on.

3 Workspace Cases

3.1 Tables in a Worksheet

1. **Paragraph cells.** Columns with widths, and cells holding paragraphs. Expect each blank inside its cell, which LaTeX sets as a paragraph column.

Object	Definition	Example
Group		
Ring		

2. **A cell spanning columns.** The last row has one blank across two columns. Expect it wider than the others, from `@characters`.

Function	Derivative	Antiderivative
$\sin(x)$		
Pattern		

3. **Alignment from the table.** The `tabular` has `valign="top"` and no row overrides it. Expect every label at the top of its row. The blanks have no `@characters`, so they are the default ten characters wide.

First

Second

4. **Table notes.** A table with a note, which LaTeX measures in a box. Expect the note below the table and the blanks unaffected.

Series[a]	Converges?
$\sum 1/n^2$	

[a] Assume all terms are positive.

5. **A table beside a figure.** A `tabular` inside a `sidebyside`. Expect the blanks to fit the narrower panel.

Data: $2, 3, 3, 5, 12$.

Mean _____

Median _____

3.2 Other Structures in a Worksheet

1. In a paragraph. Outside a table, expect the blank to hang down from the top of its line:

_____

_____

The next paragraph starts below the blank.

2. In a list.

1. State the definition:

   _____

   _____

2. Give an example:

   _____

   _____

3. In tasks. Expect workspace in each task.

_____

(a) $f(x) = x^2$ _____

_____

(b) Explain:

_____

Hint. Ignored in a hint, so expect an ordinary blank: _____.

Activity 3.1 In a project-like. An `activity` in a worksheet. Expect workspace.

_____

Prediction _____

_____

_____

4. Units. Centimeters are accepted:

_____

A page percentage is approximated, with a warning, as 1 inch:

_____

_____

_____

A bare number is replaced, with a warning, by 2 inches:

3.3 A Handout

Not in an exercise, so expect an ordinary blank and a validation warning: _____.

Checkpoint 3.2 In a handout.

Summary

3.4 A Project Outside a Printout

A `project` with workspace is a printout of its own. Expect it on a page of its own in LaTeX, and a print preview in HTML.

Project 3.3 Standalone project.

Hypothesis
